

## Trapshooting Disciplines

### *Singles*

Singles is considered to be the easiest of the three disciplines. In singles, the shooter stands 16 yards away from the center of the "trap house" and shoots at random targets that fly at various angles in front of him/ her. Shooters are grouped into squads, usually made up of up to five people. There are five positions that each shooter shoots from, for a total of five shots, or one round. This gives participants a different view of the target flying through the air. Each position is a constant 16 yards from the trap house, each one is spaced three feet apart forming a small arc. Squads rotate between four trap fields called a "bank." When the shooter is finished shooting at targets from those four trap houses, they have completed a round of 100 targets, 25 at each bank. The premier shooting event in singles is the ATA Clay target Championship.

### *Doubles*

Doubles was added to tournament play in 1911. It is a modified version of Singles, but it is more difficult because shooters must break two targets fired at the trap house simultaneously. One clay pigeon flies to the left while the other flies to the right. The target path remains constant, but the challenge is if the shooter can hit both targets before they hit the ground. Each target is scored individually, not as a pair. There are no partners in doubles. Some shooters tend to use a shotgun with two barrels for doubles and one with one barrel for singles and handicap.

### *Handicap*

Handicap is considered the most prestigious event in trapshooting. As in other sports, handicapping strives to make the competition equal. This is accomplished by having the more skilled competitors stand further away from the trap house. Based on a shooter's past performances, a shooter is assigned a handicap distance which he/she must shoot. A competitor with a high handicap will shoot no closer than the 18 yard line, while the most skilled shooter is placed at the 27 yard line. It is extremely difficult to win an event from the 27 yard line. Only twice in the last ten years has a Grand American Handicap champion been a 27 yard shooter.
